

Sturgeon
ELECTRIC

A MEMBER OF MYR GROUP INC.

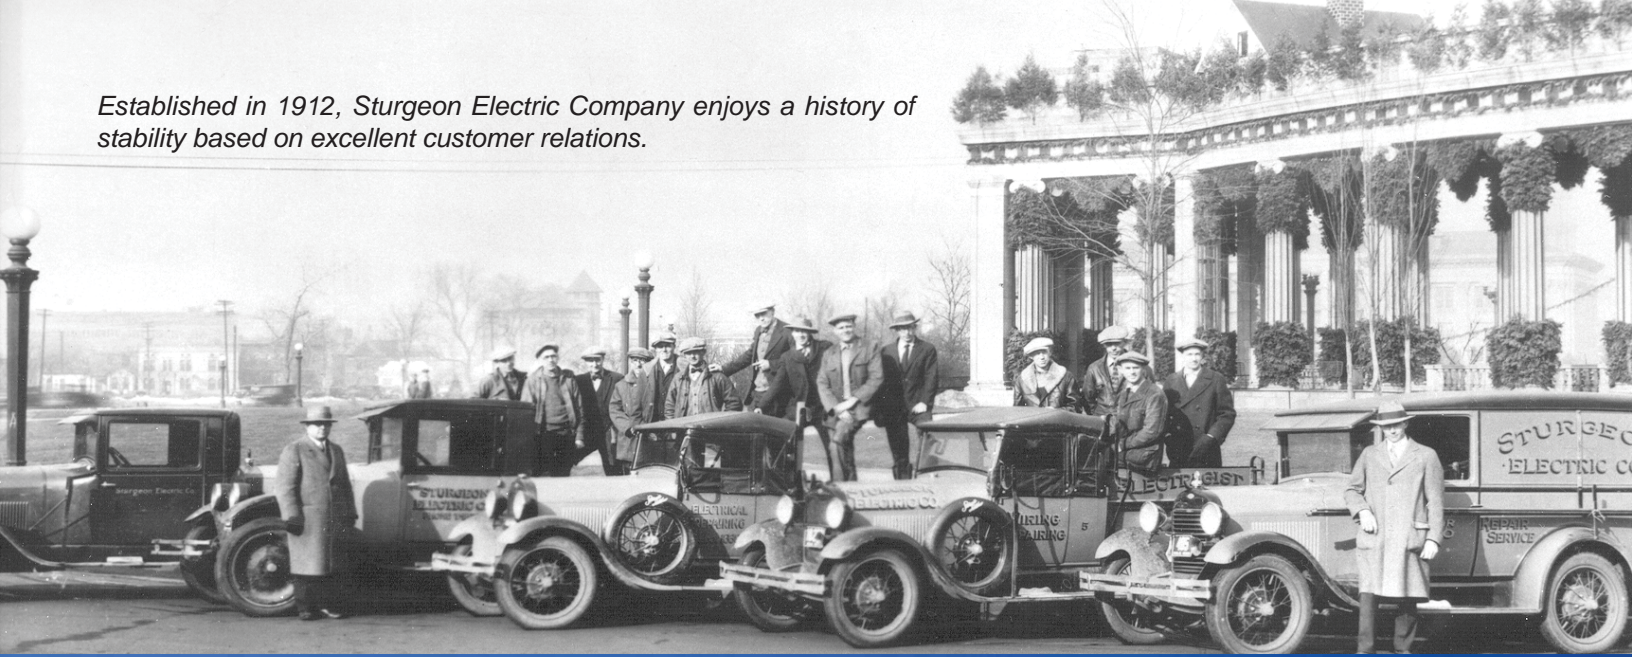

STURGEON ELECTRIC COMPANY INC.

Sturgeon Electric Company provides comprehensive electrical and communications construction nationwide. We offer commercial and industrial construction services, traffic signalization, telecommunications installations, high voltage distribution, service calls and maintenance programs. Our projects range from small renovations to large fast track mega-projects. We have extensive experience installing electrical systems in a wide variety of facility types.

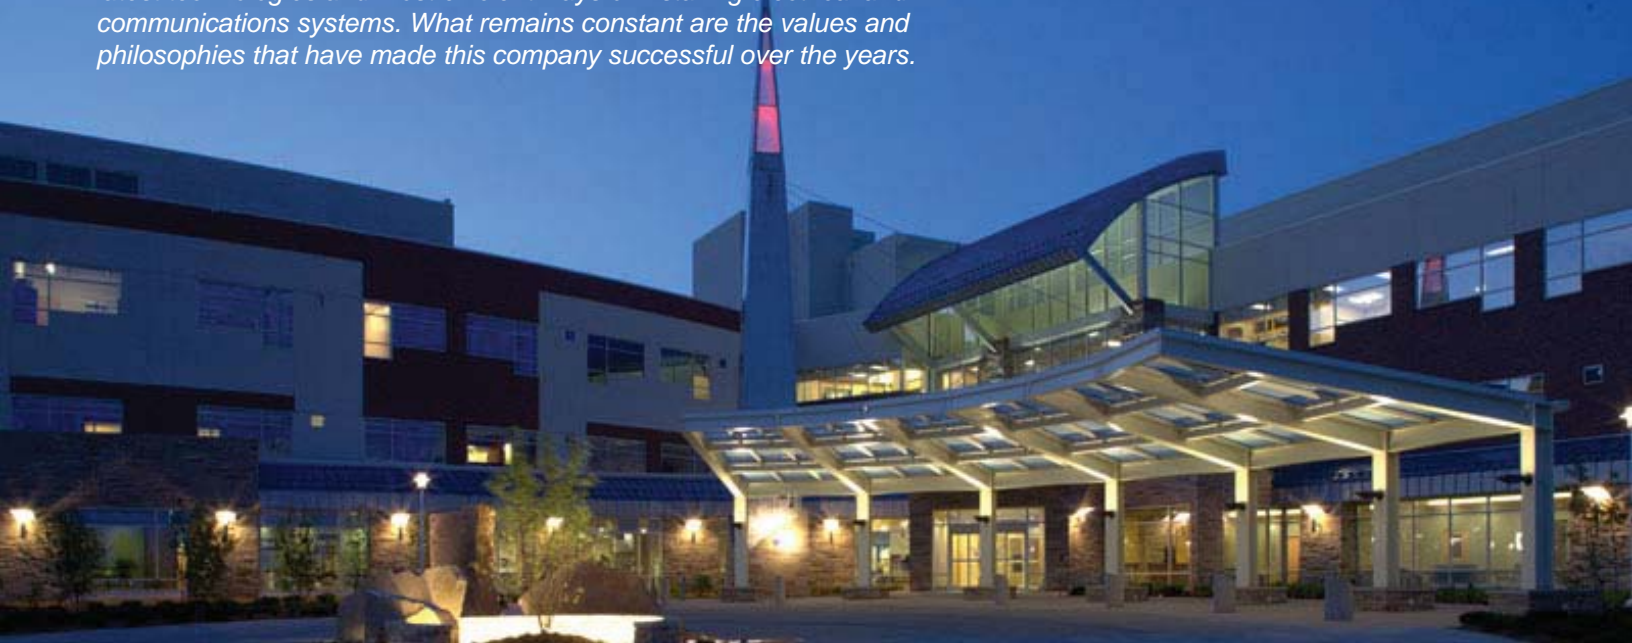

Sturgeon Electric Company, Inc. is an operating subsidiary of MYR Group Inc., a publicly traded (NASDAQ:MYRG) holding company of premier specialty electrical firms. With over 3,000 employees MYR Group is one of the largest specialty contracting companies in the country. While having a great depth of resources and nationwide reach, MYR Group companies are client-focused through local offices and personalized service. We are committed to building long-term business relationships.

Established in 1912, Sturgeon Electric Company enjoys a history of stability based on excellent customer relations.

THE TEST OF TIME

The dynamic part of our long-standing company keeps current with the latest technologies and most efficient ways of installing electrical and communications systems. What remains constant are the values and philosophies that have made this company successful over the years.

We ask and we listen. Each client has specific needs and each project has unique challenges. It is our job to understand those needs and provide solutions based on our depth of experience and resources.

While we may be proud of our past performance, Sturgeon employees know that we must benefit our clients each and every time we provide services. Our philosophy is simple: Our greatest asset is our client and our only measure of success is client satisfaction.

RANGE OF

COMMERCIAL/INDUSTRIAL ELECTRICAL CONSTRUCTION

Sturgeon provides complete system wiring for commercial and industrial facilities of all types and sizes. Jobs range from small renovations to large fast track projects. Our experience includes high tech manufacturing, clean rooms, power plants, airports, petrochemical facilities, mining operations, prisons, biotechnology laboratories, healthcare/hospital facilities, sports complexes, food processing facilities, bottling plants, government installations, hotels, casinos and office complexes.

Part of Sturgeon's long-standing reputation for quality electrical installations is our ability to keep current with the latest technologies and stay on the forefront of growth in the commercial, industrial and institutional marketplace.

TELECOMMUNICATIONS

Sturgeon offers a complete range of telecommunications / teledata installation services. Our "in-building" services include LAN/WAN, telephone, video, voice, data, security/access control and fire alarm systems. Our "outside plant" expertise includes both underground and overhead copper and fiber optic cable installation. We continuously offer new services to address the construction needs of our clients in this rapidly changing industry.

Sturgeon offers extensive experience in outside plant installations and in-building fiber optic infrastructure.

SERVICES

Sturgeon's transportation department provides construction and maintenance services for traffic management systems, intelligent transportation systems, street lighting and light rail signalization.

TRAFFIC SIGNALIZATION

Sturgeon Electric provides all phases of electrical construction in traffic and highway lighting. Our experience and capabilities include ramp metering, signalized intersections and fiber optic interconnections for traffic management systems. Additionally, we provide highway and bridge lighting installation and maintenance.

SERVICE CALLS AND MAINTENANCE

In addition to new construction, we provide renovations, retrofits, tenant finish and new additions. Our service group performs smaller installations, service calls, (including 24-hour emergency service), and long-term maintenance programs.

Sturgeon provides installation services to government transportation agencies, regional transit districts and municipalities.

POWER WHIP CABLES

Sturgeon's power whips meet the strict quality requirements for UL Standards and Certification. They are manufactured by licensed electricians with UL Listed components and are listed as Data Processing Equipment. Power Whips save time, labor, reduce project costs and minimize debris in your data center. Sturgeon manufactures power whips in six conduit colors, with other options to include single or multiple circuits, plug-in or bolt-on breakers, and custom labeling. All orders are provided with quick turn around and fast delivery.

GROUND PENETRATING RADAR

Sturgeon's ground penetrating radar uses radio waves to penetrate the surface inside concrete. The power output is very low so there is no need to evacuate the area or have the scans performed during off-hours. Sturgeon also has a Conquest PCD (Power Cable Detector) Enhanced System which works by sending radio waves into the subsurface and measuring the travel time for the returning reflection. The PCD uses new technology to the magnetic fields created by current flow in electrical wiring. Early warning of power cables in concrete reduces the risk of damages and injury.

RENEWABLE ENERGY

Renewable energy is becoming an increasingly larger part of the U.S. energy portfolio. In 2003, the company began constructing substations, transmission lines and collector systems for wind and solar farms. Since that time we have worked on multiple renewable energy projects. With rapid growth in this area, MYR has focused its power line construction expertise on the evolving need to connect these alternative energy resources to the power grid.

ENERGY MANAGEMENT

Our services, such as infrared inspections, help to prevent equipment downtime, premature equipment failure and unnecessary energy usage. Through energy audits and installation of upgrades to your building systems, we will work with you to achieve energy conservation at any phase, from new construction to design build, and for existing facilities. Our energy management services include electrical installations, project management services, infrared inspections, energy analysis and audit services, lighting upgrades and automation, solar energy installations, HVAC control installation and commissioning services and more!

INFRARED IMAGING

Sturgeon's voice-data-video department is at the forefront of technology with our Infrared Imaging Services. Any object with a temperature above Absolute Zero (-459.67° F) produces a heat radiated footprint invisible to the human eye. With Fluke Thermal Imagers, we have the ability to measure these infrared "Hot Spots" providing the latest in preventative maintenance diagnosis. Sturgeon uses licensed electricians - trained and certified as Level I and II thermographers by Flirs Infrared Training Center (ITC) - to conduct the inspections.

FULL SERVICE PROVIDER

Sturgeon Electric, a subsidiary of MYR Group Inc., provides a full range of electrical construction services for electric utilities, telecommunication providers, industrial facilities and government agencies across the entire United States. Sturgeon provides all phases of electrical construction and maintenance including high voltage power lines and substations; commercial and industrial projects; voice, data and video fiber optics; traffic signalization; and telecommunications infrastructure. Preconstruction services, design-build and turnkey capabilities can also be provided.

EXPERTISE

WE PROVIDE

DESIGN-BUILD AND PRECONSTRUCTION SERVICES Our employees understand that cost effective projects result from anticipating problems and resolving issues before construction begins. Our extensive experience in preconstruction services is comprised of conceptual estimating, budgeting, value engineering, scheduling, constructability reviews, permit acquisition, life cycle costing, preordering, system analysis and CAD drawings. As part of a design-build team, we offer a wealth of construction experience for input on design. Our history of preconstruction services shows that through careful analysis and creative value engineering we typically reduce the initial budget while maintaining or improving the integrity of the design.

FINANCIAL DEPTH As a member of MYR Group, Sturgeon Electric Company has the financial resources to complete electrical installations of any type and size. Our market strength enables us to negotiate favorable pricing with our suppliers for tools, equipment and materials.

SEASONED MANPOWER AND TRAINING The longevity and wide ranging project history of Sturgeon Electric and our other MYR Group subsidiaries provide our clients a work force with extensive experience. Along with a strong background of technical education and on-the-job training, our field supervisors at all levels of management are continuously trained in leadership and managerial skills.

STRONG SAFETY CULTURE We know safety and productivity go hand-in-hand. MYR Group develops, enacts and monitors the safety programs of all operating companies. Each employee is trained in safety, and each employee is held responsible and accountable for a safe work environment.

"MYR Group is a true leader in employee safety and health, especially in the construction industry," said Greg Baxter, OSHA Regional VPP Administrator in Denver. "We are very fortunate to have high quality employers such as MYR in our region. Sturgeon Electric is the first electrical contractor in Region VIII to receive VPP recognition. This is a reflection of hard work, commitment and a sincere focus on workplace safety and health excellence."

STURGEON ELECTRIC COMPANY BRINGS

VALUE

Sturgeon Electric Company is uniquely qualified to offer the highest quality installations in the most cost efficient way.

OUR VISION / MISSION / VALUES

OUR VISION Our vision is to be recognized by our constituents as the leader in the specialty contracting industry.

OUR MISSION Our mission is to be the preferred provider of construction services to each of our clients, to create rewarding jobs for each of our employees and to earn a fair return.

OUR OPERATING PRINCIPLES Operating Principles require a total commitment to safety, Adhere to the highest ethical standards, field the best trained and equipped work force, utilize innovative, productive and safe work practices, provide high quality workmanship, and understand and achieve each client's expectations.

OUR VALUES Values are our fundamental beliefs that shape our behavior, guide and inspire us. Values help to describe the culture that the organization is trying to build. Our culture is built upon these values:

SAFETY

RESPONSIVENESS

TEAMWORK

CREATIVITY

RESPECT

INTEGRITY

INITIATIVE
